SPLIT JOURNAL BEARINGS: MADE IN USA

Babbit and bronze.

SPECIAL MOUNTED
UNITS AG BEARINGS

Split bearings are recommended for application where it is necessary to remove a cap for servicing or replacing a bearing. This style eliminates removing pulleys and couplings from the shaft when replacement is required. Loading range is limited to 30° below the joint. The angular parting of the cap is provided with shims to compensate for wear and adjustments.

TIMKEN® FLANGED DISC UNITS: MADE IN USA

Flanged disc harrow bearing units are integral assemblies specifically designed for the most severe tillage applications. Each configuration incorporates certain special dimensional attributes making the unit compatible in a variety of equipment designs. Inherent in most designs are two heavy gauge case hardened and zinc plated stampings which encapsulate the bearing with eight cold formed rivets for guaranteed integrity. Within the cavity two nitril O-rings are installed to exclude contaminants and provide a grease seal to ensure lubricant feeds directly into the bearing. The grease fitting is permanently retained in the stamping for easy access and maximum protection for the environment.

HEAVY DUTY DISC HARROW BEARINGS

- Solid rivet
- Dynamic alignment
- Positive relubrication
- Plated case hardened stampings
- Circumferentially restrained outer ring
- Close clearance shroud protects bearing
- High performance USA disc harrow bearing

REPLACEMENT TUBE & SPINDLE KIT FOR JOHN DEERE® 630 DISK

Agri Industrial's tube and spindle kit will replace the John Deere® #N189873 and #N240209 spindle on the 630 tandem disk wing and main wheel transport wheel.

Simply burn off the damaged spindle from the frame and weld back the Agri #T10001 tube in its place. The next time you have a spindle break, just replace it with the Agri #S10002 spindle.

Instead of replacing an expensive long spindle, you need only purchase one of Agri Industrial's spindles.

REPLACEMENT JOHN DEERE®

PART #	DESCRIPTION
TS100	Consists of tube, spindle, and bolt kit

HYDRAULIC CYLINDERS
& PARTS

CROSS HYDRAULIC CYLINDERS: DCR & DR SERIES: MADE IN THE USA

DCR and DR cylinders incorporate an internal piston bypass for synchronizing (rephasing) cylinders in a series circuit. The DCR also features a hydraulic depth control with adjustment from 0" to 8" stroke for use as a master cylinder in a system with DR slave cylinders. These systems are widely used on tillage tool implements.

All cylinders are plumbed. Bores and rod diameters are volumetrically matched so that all cylinder rods move equal when stroked. At the end of stroke system is resynchronized through the piston bypass in each cylinder.

- 2500 psi work pressure
- Clevis mounting
- 3/4-16 SAE ports
- Hardened and chrome plated rods
- Close tolerance head seals to prevent system contamination
- Top porting DCR
- Ports in line with pins on DR
