

Pit stop: Efficacy and safety

Preset hub assemblies

Preset hub assemblies are the ideal solution that provides a fast, safe and efficient mounting, ensuring a longer service life of the bearing.

Integrated solutions for our bearings are manufactured and assembled for easier mounting, ensuring optimal performance of your components.

Security and comfort | minimum amount of necessary handling.

Speed | ease of mounting, thanks to it being one unified piece.

Efficiency | excellence in the development, design, manufacture and mounting of the piece.

Why preset hubs?

Preset hub assemblies consist of two mechanical components, bearing - hub, that allow the handling of the piece at the time of assembly or disassembly.

In addition, the combination of all the elements in a single assembly ensures excellent fit and improvements in working conditions.

Fersa: committed to innovation.

Thanks to different collaborations with leading automotive manufacturers, we have developed a new solution designed for our clients, providing comfort, safety and efficiency. At Fersa Bearings, we continue to develop and improve products that address the daily challenges of the market.

F 400001

Brand	Mercedes Benz
OEM	000 350 2335
Position	Eje de trailer
Note	Brake disc / Brake disc screws included Stock

F 400009

Brand	Volvo * Renault Truck
OEM	85114470 * 85111791 * 85111448 * 20535202
Position	Front axle
